Misha Vakoc  
Municipal Stormwater Coordinator  
EPA Region 10  
1200 Sixth Avenue, Suite 155  
Seattle, WA 981101

Ms Vakoc,

In the interest of public safety from drinking water contaminates containing PFAS please extend the existing public comment time that expires on November 14, 2019.

(b) (6) We have been aware of toxic contamination from NASWI for decades including the bomb dump along Hoffman Road. Wet lands existed at the present site of NASWI runways. Paving over these wetlands in 1942 has caused toxic drainage flowing to Dugalla Bay. Fish planted in the drainage pond by WA State Fisheries decades ago did not survive. As far as I know the pond has never been tested for toxins in spite of evidence there are indeed toxins in the water. On (b) (6) dairy farm Dairygold refused to accept milk production from his cows. The cows udders would drag in the water of the slough becoming contaminated with aircraft fuel. The planes then were prop planes. (b) (6) to protect income from milk production set the slough on fire. The base commander came to (b) (6) farm to investigate the fire. (b) (6) refused to allow the commander on his property claiming he was not allowed on the navy reservation that at one time belonged to his family.

In the interest of protection to marine life such as Orcas and Salmon the public needs assurance toxic contamination is controlled. It is also vital to human health.  
Thank you for your dedication to the environment.

With respect,

Mari Deen Anderson
